These look fine... Not a lot of difference. I am however, disappointed that they didn't provided recalculations of all the PRGs, rather than just the three that moved into the FS. As we've discussed the possibility of incorporating the subsistence fisher, we should definitely see how that one looks recalculated with an RBA of 1. Matter of fact, we should see all PRGs recalculated having to do with ingestion of fish or crabs.

Phil,

Please let me know if you agree with, or have any comments on these PRG calculations.

Thanks,

Gary Miller
